

Ariel Yohimovich

Full Stack Software Engineer

ariel93yohimovich@gmail.com | 054-6544308 | [LinkedIn](#) | [GitHub](#)

Summary

Full-stack engineer with 5+ years across product development and technical education. Built and taught a full-stack curriculum (TypeScript, Node.js, React, Docker, Kubernetes, CI/CD) to hundreds of students, several of whom moved into industry roles. Shipped and maintained production mobile and web applications end-to-end, and previously built a Jenkins-integrated automated test suite that caught regressions before they reached production. Self-taught in emerging fields including AI/ML, and now teaches additional courses on machine learning and effective, efficient AI usage.

Experience

Software Engineer, Full-Stack Curriculum Author, Lecturer & Project Mentor | LeadersApp Technologies

2025 – Present

(Returned to LeadersApp after a 7-month full-stack internship at LS Technologies)

- Author and continuously maintain an original full-stack curriculum built around modern TypeScript (ES6+) and the JavaScript event loop, taught hands-on to hundreds of students to date.
- Teach and mentor on the full production toolchain: Express, MongoDB, React, HTML/CSS, Git & GitHub, Docker, Kubernetes, AWS (EC2), Authentication & Authorization (JWT), and CI/CD pipelines (GitHub Actions, Jenkins, Postman, Puppeteer).
- Provide 1:1 project mentorship — code review, debugging, and deployment guidance — helping students ship portfolio-ready applications.
- Use Claude daily as part of the development and teaching workflow, for code review, debugging support, and curriculum content creation.
- Self-taught in AI/ML; independently developed and now teach additional courses covering machine learning fundamentals, effective AI tool usage, and token-efficient prompting.

Full Stack Developer (Internship) | LS Technologies

2024 – 2025 · 7 months

- Maintained and debugged production mobile applications (React Native, TypeScript) and their Node.js/Express/MongoDB backends.
- Implemented and maintained authentication & authorization (JWT) on the backend.
- Worked within legacy codebases: refactored existing code and pushed for improved documentation practices.
- Used GitHub Copilot in VS Code to speed up day-to-day development, debugging, and refactoring work.
- Manually built and deployed release artifacts to the Play Store (Android) and App Store (iOS).

Lecturer & Project Mentor | LeadersApp Technologies

2021 – 2024 · 3 years

- Taught programming to teenagers as part of the Mamram program, delivering hands-on instruction to hundreds of students across JavaScript, Java, Python, C, C#, Node.js, Express, MongoDB, and HTML.
- Designed and implemented a comprehensive curriculum covering core programming concepts, tools, and techniques required for the Mamram course, preparing students to enter the Mamram unit in the Israeli Army.
- Conducted student assessments, provided constructive feedback, and encouraged collaboration and teamwork throughout the program.
- Provided ongoing troubleshooting support and project mentorship, guiding students from first line of code to a completed working project.

Software Developer (Student Position) | FXEmpire

2018 – 2019 · 7 months

- Wrote thousands of automated UI end-to-end tests (Puppeteer over Jest) as part of the company's migration from manual to automated QA.
- Integrated the full test suite into a Jenkins CI pipeline, so every merge to the main branch automatically surfaced failing tests or breaking changes, preventing bugs from reaching production.

Education

- B.Sc, Software Engineering — SCE (Sami Shamoon College of Engineering)
- Full Stack Web Development Course — SVCCollege

Military Service

Technician, Israeli Air Force

Skills

Languages: JavaScript, TypeScript

Frontend: React, React Native, HTML, CSS, SCSS

Backend: Node.js, Express, MongoDB, Authentication & Authorization (JWT)

DevOps & Tools: Docker, Kubernetes, AWS (EC2), GitHub Actions, Jenkins, CI/CD, Git, Postman, Puppeteer

AI-Assisted Development: Claude (daily use), GitHub Copilot

AI & Machine Learning: Self-taught — ML fundamentals, prompt engineering, token optimization

Languages Spoken: Hebrew (Native), Russian (Native), English (Proficient)
